■ Variations on Paul Rudolph's Quadron

The Quadron chandelier **CH07** designed by **Paul Rudolph** perfectly utilizes MODULIGHTOR's system to create a stunning design. Now that form is inspiring a whole new generation of lighting solutions. In the last year several of our customers have selected fixtures that pick up where the Quadron leaves off. And now there are even more finishes available! (see previous post)

No matter where the electrical feed is or how atypical the floor plan is this approach can solve several issues in one elegant design. Come talk to us about your project's unique circumstances.
